Astrological Gemstone Names

The universe of gemstones is mammoth, visually stunning, miraculous, and enigmatic, and we can keep identifying it till we run out of words. A gemstone, in its totality, is a piece of mineral that is treated, cut, and polished accordingly to make it fit for different purposes (jewelry, adornments, spiritual and metaphysical realms).

The **history of gemstones** is as archaic as the existence of human civilization. Only the usage and implications have changed and diversified as well with the evolution. The first classification of the gemstones was done by the Greeks into precious and semi-precious categories. With the passage of time and the emergence of umpteen precious and semi-precious gemstones, the classification become more broad and deep.

Let's make you all familiar with Gemstones names of all noteworthy gemstones, types of gemstones on value, and the complete list of gemstones by color.
